

# ABOUT US

VINCHENCIO was founded by Mr Vincent Ong in 1992. It was initially set up as a Trading and Supply company dealing with electrical goods and electrical installation.

Presently, its core business has expanded to Customized Software, Control System, CCTV, Audio/Visual, PA Sound System and other turnkey projects.

Lately, the company has produced a software system that integrates with Internet of Things (IoT) Technology. VINCHENCIO aims to become a frontline company in the area of Information and Technological Innovations that will provide a total solution to accelerate the knowledge and improve the effectiveness of people and organization.

The company believes in encouraging the development of each staff's abilities and potential, and reward accordingly as we work together to bring the company to new heights.

## SMART IDENTIFICATION MANAGEMENT SYSTEM (SIMS)

*Convenient and flexible device solution for you.*

## SMART IDENTIFICATION MANAGEMENT SYSTEM (SIMS)

The Smart Identification Management System (SIMS) is designed to assist our users to have a convenient and flexible registration solution to cater to their company's requirement. It reduces human errors and increases reliability and efficiency in the security aspect. It is designed to track and monitor personnel, visitors, delivery, and also can be used for booking of facilities.

With the advanced technological support of the SIMS, it eases the administration of web managing, static coding and viewing reports. It guarantees speedy response for both users and the management team. If the system detects any abnormalities, it will be channeled to the management team immediately for further actions. It also provides daily reminder service through SMS notification for users to sign out.

Find out more from us now!

## KEY FEATURE

Auto escalation for non response

Daily reminder service through SMS notification

Manage and report anywhere

It is important that all visitors, including contractors and delivery personnel, entering the company's premises should be tracked and monitored.

SIMS allows any visitors to register, obtain entry approval and leave the premises with complete monitoring and tracking by the system without the use of manpower at the reception counter. Company's staff are able to communicate with visitor via the system through the use of SMS.

Solutions according to PDPA guidelines.
